Software Engineer | Tech Lead | Software Architect

.NET · Angular · Vue/Nuxt

Summary

I have been working as a **Full-stack Web Developer** since 2012, with extensive experience in technologies such as C#, ASP.NET Core, Angular, Vue/Nuxt, and Node.js (JS/TS). My specialization is in **Software Architecture**. I have worked on the development and structuring of projects from scratch as well as important modules of large projects. I also have experience as a **Tech Lead** (hands-on), technically leading teams and managing people.

I entered the field in 2009 and graduated with a Bachelor's degree in Computer Science in 2014. Since then, I have continuously improved my skills through numerous free courses, books, videos, and articles.

As a Tech Lead, I perform technical refinements, mentoring of team members, code reviews, architecture and solution definitions, facilitation of ceremonies, and client contact. I seek to promote a culture of collaboration and respect, with a focus on delivery. A light environment generates greater synergy, and the safety to raise suggestions and criticisms without fear of retaliation increases the quality and confidence of deliveries. Management based on agility develops responsibility for delivery, autonomy in problem-solving, and a sense of belonging to the results, in addition to favoring continuous improvement.

As a full-stack developer, I develop web systems end-to-end: Front-end, respecting the layout defined in prototypes (such as Figma); Back-end, applying architectural styles and patterns and code quality concepts such as Clean Code, Clean Architecture, DDD, CQRS, Microservices, Modular Monolith, etc., along with automated tests; Database, using ORMs (Entity Framework / Dapper) and SQL, including procedures (T-SQL), views, triggers, indexes, normalization/denormalization, as well as NoSQL (MongoDB, Redis).

I have experience with queuing and messaging using RabbitMQ and Hangfire. I also handle DevOps demands as needed by the project, such as containerization with Docker, CI/CD pipelines, and deployment to clouds such as AWS or Azure.

I am well-versed in agile methodologies, especially Scrum, as well as Kanban and XP. I can act as Scrum Master, teaching the team to work with the framework.

I actively use AI tools in my daily work, enhancing the quality and speed of deliveries without giving up control and inspection over what the AI produces.

I have experience across various areas and types of projects, such as startups, large financial institutions, and the public sector, creating and maintaining a wide range of systems and solutions.

I have excellent conversation skills in Spanish. In English, I have good reading skills and can work on international projects as long as communication is written.

Technical Skills

Technologies:

Front-end:

Angular, AngularJS, Vue.js, Nuxt, React, ASP.NET MVC (Razor), Blazor, HTML5, CSS3, Sass, JavaScript, TypeScript, Bootstrap, Angular Material, jQuery, Figma.

Back-end:

C#, .NET and .NET Core, ASP.NET (MVC with Razor, Web API REST and Minimal API), Entity Framework, Dapper, ADO.NET, Serilog, MediatR, Wolverine, SOAP, Spectre.Console (CLI applications), JavaScript, TypeScript, Node.js.

Messaging, scheduling, and background processing:

RabbitMQ, MassTransit, Hangfire, Wolverine, Quartz.NET.

Security and authentication:

IdentityServer4, Keycloak, OAuth 2.0, OpenID Connect (OIDC).

Databases:

Relational: SQL, MS SQL Server, T-SQL (Transact-SQL), PostgreSQL, MySQL, modeling (ERM/ERD), Procedures, Views, Functions, Triggers, indexes, normalization/denormalization.
NoSQL: MongoDB, Redis.

DevOps and Cloud:

Git (command-line), Docker, Docker Swarm, Kubernetes, CI/CD pipelines (Azure DevOps and GitHub), Azure, AWS.

Testing:

xUnit, Karma/Jasmine, SpecFlow, Reqnroll, Cucumber (JS), K6, Selenium, Playwright.

AI in development:

Claude Code, Codex, GitHub Copilot, Continue.dev (with Mistral/Codestral models).

Management and collaboration:

Azure DevOps, Jira, Trello.

UML (diagrams):

Use Case, Class, Object, Package, Sequence, Communication, State Machine, Activity, Interaction Overview, Component, Deployment, Composite Structure, Timing.

Patterns:

Design patterns:
Result Pattern, Command, Template Method, Strategy, Singleton, Monostate, Null Object, Factory Method, Abstract Factory, Observer, Adapter, Facade, Repository, Builder, DAO, Proxy, Promise, Module (JavaScript), Unit of Work, Active Object, Mediator, Composite, Abstract Server, Bridge, Gateway, Visitor, Acyclic Visitor, Extension Object, Decorator, State.

Architecture patterns:
DDD, Clean Architecture, CQRS, BOLOVO (legacy UI+BLL+DAL), Onion Architecture, Ports and Adapters (Hexagonal), Event-Driven, Event Sourcing, Vertical Slice, Screaming Architecture, Modular Monolith, Microservices, Multitenancy.

Code Quality:
SOLID, Clean Code, DRY, YAGNI, KISS.
Agile methodology and leadership:

Scrum (Scrum Master), Kanban, XP, TDD, BDD, code review, mentoring, technical refinement, writing User Stories, supporting the PO in backlog structuring, Security Champion.

Education

Universidade Veiga de Almeida (Veiga de Almeida University)
Bachelor's in Computer Science
Start: 2009 – Completion: 2014

Portfolio

I maintain open-source libraries I developed on GitHub, published on nuget.org and npmjs.org, as well as technical challenges completed during selection processes. Here are the links:

Published libraries:

- ResultPattern – .NET library for error handling using the Result Pattern, returning success or failure explicitly, with statuses mapped automatically, without relying on exceptions for flow control. A pattern I also implemented professionally in projects at Smart Travel and Olik.
- FluentBlueprintBuilder – .NET library for fluent object creation based on scenarios and predefined values, especially useful for assembling data for automated tests. Also used in projects at Smart Travel and Olik.
- ngx-show-form-errors – Angular library that automates the display of form validation error messages.

Technical challenges:

- CashFlow – Simulation of cash flow entries and reports in .NET, with unit tests (xUnit), behavioral tests (BDD), and load tests (K6), containerized with Docker, using PostgreSQL as the database and Seq for logs.
- BestRoute – .NET API that, given N routes, calculates the cheapest path between two points (nodes). A classic graph problem solved with Dijkstra's algorithm and covered by unit tests in xUnit.
- Test-C – Simple .NET API for product search, with simulated business rules and an in-memory database.

Books

Some books that have been crucial to my career include:

- **Clean Code: A Handbook of Agile Software Craftsmanship**, *Robert Martin*
- **The Clean Coder: A Code of Conduct for Professional Programmers**, *Robert Martin*
- **Agile Principles, Patterns, and Practices in C#**, *Robert Martin*
- **Scrum: The Art of Doing Twice the Work in Half the Time**, *Jeff Sutherland*
- **Test-Driven Development: Real World Testing and Design with .NET***, *Mauricio Aniche*
- **eXtreme Programming: Practices for Agile Software Development***, *Daniel Wildt*, *Dionatan Moura*, *Guilherme Lacerda*, *Rafael Helm*
- **Agile Metrics: Achieve Better Results with Your Team***, *Raphael Donaire Albino*
- **Domain-Driven Design: Tackling Complexity in the Heart of Software**, *Eric Evans*
- **UML 2: A Practical Guide***, *Gilleanes T. A. Guedes*
- **.NET Microservices: Architecture for Containerized .NET Applications**, *Cesar de la Torre*, *Bill Wagner*, *Mike Rousos* (currently on hold)

**free translation.*

Languages

- **Portuguese:** Native.
- **Spanish:** Fluent (C1). I converse and write without difficulty. I worked on-site in Santiago, Chile (2018).
- **English:** Intermediate (B1-B2).
  - **Reading:** B2 – I read technical documentation on a daily basis.
  - **Writing:** B1.
  - **Listening comprehension:** Partial, in development.
  - **Speaking:** Basic, in development. I have good pronunciation, but I still lack fluency and vocabulary.

Additional Training

I have completed numerous courses, mainly with *"Eduardo Pires - Treinamentos e Consultor*ia" (Eduardo Pires - Training and Consulting), *"Desenvolvedor.*IO" (Developer.IO), *"Origam*id", and *"Alu*ra".

On these platforms, I have taken countless courses on a wide variety of topics, including ASP.NET, JavaScript, Angular, Software Architecture, Testing, DDD, TDD, Scrum, Node.js, Databases, Design Patterns, best practices, performance, DevOps, and many others.

I was also a subscriber to Alura Língua and completed module 5 (advanced) of English.

Listing all courses here would be excessive. I created an appendix at the end listing the most important ones that issued certificates.

Work Experience

Company: Olik

Start: October 2025 **End:** October 2026

Description: Tech Lead and full-stack developer (.NET, Angular, and Vue/Nuxt)

Activities: I joined as a .NET developer and was promoted to Tech Lead 6 months later, in April 2026. I first led a squad of 4 developers and 1 QA in building a mobile application for the aesthetics sector, using .NET, Flutter, and Angular. I then led a squad of the same size in creating from scratch a product specialized in the insurance sector for the insurer Fairfax, using .NET and Vue/Nuxt. In this project, I designed and developed the base architecture as a Modular Monolith with BFF, and guided the team toward the solution throughout the sprints. I also taught the team to work with Scrum and agility, established the Scrum ceremonies and workflows in Jira, and helped the Product Owner review and structure the stories in the Product Backlog from the beginning of the project, participating in meetings with the client and understanding the product rules and goals broadly.

In addition to the work in the squads, I created and led the “Papo de Código” (Code Talk) initiative, where we held biweekly chats with developers from across the company, and professionals from related areas such as POs and managers also participated. In these meetings, I raised topics of interest to the participants and facilitated the discussions so that the conversation flowed smoothly.

Company: MeuCashCard

Consulting Firm: SquadPremium · temporary contract

Start: December 2024 **End:** April 2025

Description: Tech Lead and full-stack developer (.NET and Angular)

Activities: Acted as tech lead of a team of 7 developers, assisting in the development of activities, understanding of the architecture, maintenance of best practices and company conventions, Code Review (Pull Request analysis), conduction of ceremonies, and promoting improvements in the development flow and processes. I also managed the team’s impediments, resolving them directly with other areas of the company or with external companies.

Development on a key product to enable greater automation in credit analyses, focused especially on integrations with various external systems, using REST, SOAP, and even RPA (automation) with Selenium, and making them available for internal consumption through proprietary APIs. I also implemented queuing with Hangfire and assisted in configuring Amazon Cognito for OIDC. Main tools: .NET, SQL Server, Azure DevOps, and AWS. Internal portal developed in Angular.

Company: THS Tecnologia

Start : June 2024 **End:** September 2024

Description: Full-stack developer (.NET and Angular)

Activities: Development of the new intranet system for CICC-SP, developing new features and maintaining existing ones. Architecture based on Clean Architecture and CQRS, using ASP.NET, SQL Server, and Angular.

Company: Smart Travel

Start: November 2022 **End:** June 2024

Description: Full-stack developer (.NET and Angular) and Software Architect

Activities: Development of new features, maintenance, and bug fixing in SmartBus, a bus ticket sales and management system, using ASP.NET (framework 4.6, .NET 7, and .NET 8), SQL Server, Angular, React, and RabbitMQ, in a three-tier architecture system (BLL, DAL, UI).

As an architect, I was responsible for the creation of two projects from scratch, both in architecture design and coding, focused on asynchronous processing of high-volume batch data. These projects were created to serve as the standard model for the company's new projects. In them, I introduced new patterns and technologies, such as integration with queues via RabbitMQ, logs in ElasticSearch with Serilog, Result Pattern for error handling, Clean Architecture in both, and CQRS in one of them, for example. The new systems also brought a significant improvement in the implementation of multitenancy, with a solution redesigned from scratch, making the database connection dynamic according to the client identified in the request.

Company: Prodesp

Consulting Firm: G&P

Start: June 2022 **End:** September 2022

Description: .NET Developer

Activities: Worked on the project to rewrite the Official Gazette of the State of São Paulo from scratch, using ASP.NET (.NET 6), React, SQL Server, MongoDB, RabbitMQ, and Node.js, among other technologies. I participated in the creation of some .NET projects and, notably, was responsible for the creation from scratch of a Node.js project with Clean Architecture and processing via RabbitMQ queues.

Company: Farmarcas

Consulting Firm: Pasquali Solution

Start: July 2021 **End:** June 2022

Description: Fullstack Developer .NET and Angular

Activities: Development of new features, maintenance, and bug fixing in Radar, the company's main system, which offers various management tools for associated entrepreneurs, from registration of associates and products and management of marketing campaigns to a small integrated e-commerce. We mainly used ASP.NET Core in the APIs, Angular in the front-ends, and MySQL in the database, among other technologies. We used Sentry as a service for error tracking and monitoring. The cloud service used was AWS. I helped implement queues using RabbitMQ and was responsible for the full-stack development of several complete epics, end-to-end.

Company: Banco BS2

Consulting Firm: K2

Start: July 2020 **End:** June 2021

Description: .NET Developer and Security Champion

Activities: Worked in the squad responsible for the Corporate Charges microservice, with maintenance, analysis, and bug fixing, and implementation of new features in .NET Core APIs with CQRS, SQL Server, and integration with other systems. I helped implement process queuing with RabbitMQ. I had a strong role in PDF payment slip (boleto) generation and in the complete rewriting of the CNAB file generation module to support high-volume batch data processing.

I was the team's Security Champion, a role of integration with the Information Security squad, of which I was also a part, transmitting pentest results to the team, promoting security best practices, and the correction of possible vulnerabilities.

Company: Itaú

Consulting Firm: Certsys · temporary contract

Start: September 2019 **End:** March 2020

Description: .NET and Angular Developer

Activities: I was one of those responsible for the complete rewrite of a legacy internal system, migrating from MPA (traditional ASP.NET MVC) to SPA with Angular and .NET Core. The system controlled and managed scripts and routines requested by users without execution privileges, for later analysis and execution by the responsible area. The front-end was redesigned with a more modern and usable interface, and the back-end was refactored to serve the new front-end and migrated to .NET Core. I also implemented integration tests with Selenium.

The hiring was under a temporary contract, with hours specifically allocated for the project in question.

Company: Santander

Consulting Firm: Indra

Start: March 2019 **End:** September 2019

Description: Front-end developer and technical lead (Angular 7)

Activities: I was the technical lead for the creation from scratch of the front-end of the new National Customer Registry, an important internal system that was being completely rewritten and that allowed various types of queries across the bank's entire customer base. I defined and developed the front-end architecture from scratch, both the code structure and the layout, and developed most of the application until my departure. In this project, I worked exclusively as front-end.

Company: Bom Pra Crédito

Start: December 2018 **End:** February 2019

Description: Full-stack developer (.NET, .NET Core, AngularJS, Angular, and Node.js)

Activities: Development of new features and bug fixes in the company's systems. The main system was a personal loan offer comparison platform, developed in .NET, Angular, and AngularJS, with a migration in progress to .NET Core. Other internal projects also used other technologies, such as NodeJS and Python. I also created queries for MongoDB and managed the execution in production of some RPAs built with Selenium.

Company: XMS Business Solutions (Chile, on-site)

Start: March 2018 **End:** November 2018

Description: Full-stack developer (.NET, .NET Core, AngularJS, and Angular)

Activities: Consulting and system development in a software factory, using ASP.NET (Framework and Core), C#, SQL Server, AngularJS, and Angular. As a full-stack developer, I participated in the development of several products from start to finish, also contributing to entity and table modeling. Among the projects, I highlight the post-sale control system for SalfaCorp, one of the largest engineering companies in Chile; an online course platform; and a complete evaluation system, with exam registration with various question types, application to the student, automatic correction of objective questions, and correction by the teacher of discursive ones.

On-site allocation in Santiago, Chile.

Company: Confitec

Start: August 2013 **End:** October 2016

Description: Systems analyst and developer (ASP.NET)

Activities: Initially, I worked on Gepro, the company's main proprietary product, focused on claims and their provisions, which generated reports and pointed out possible inconsistencies in the databases of major insurers in the country. In this system, developed in ASP.NET Web Forms, Crystal Reports, and SQL Server, I gained significant experience in creating and maintaining procedures, which were the data source for various reports.

Later, I worked on the Portal do Corretor, an important system of Brasil Brokers used by brokers and internal administration, where properties, clients, potential clients with their interests, and sales were registered. It was the project to which I dedicated the most time in the company. Occasionally, I also supported the team responsible for the Brasil Brokers portal.

I also assisted in the initial development of Girus, a new system of the company similar to Gepro, focused on the reinsurance market.

My activities included requirements gathering with the client, analysis and resolution of errors, development of new modules and features, and writing documentation. Main technologies: ASP.NET, C#, and SQL Server.

Company: IMAGO IT Solutions

Start: January 2013 **End:** June 2013

Description: Internship in web development (ASP.NET)

Activities: Analysis and resolution of errors; support in the development of new systems; writing documentation and manual execution of tests. Main technologies used: ASP.NET, C#, and SQL Server. The main client I worked for was Cultura Inglesa, where I participated in the development of a distance learning portal (online course) and maintenance of a system in classic ASP.

In addition to the experiences listed above, previously I completed two other internships as a developer, worked twice in technical support, worked as a computer maintenance technician at Caixa Econômica Federal (brazilian public bank), and my first job was as a telemarketing attendant for Tim, at the age of 18.

Who I Am

I enjoy programming, singing, and playing the acoustic guitar.

I also enjoy studying various topics such as economics, philosophy, mathematics, geopolitics, and theology, having already read some books in these areas. I completed one year of a bachelor's degree in mathematics, with a grade of 10 in all subjects, and I plan to return in the future.

I have a great ease of learning, and a large part of my studies are self-taught, from the most diverse types of sources: books, articles, courses, blogs, videos, etc.

I value transparency, honesty, and respect. I am proactive, but I also take care to respect the guidelines and hierarchy of the teams.

I always strive to develop my work in the best way possible, delivering real and lasting value, and I am always seeking knowledge to improve my capabilities.

I value respectful and organized environments, and I have experience in structuring processes and workflows (Scrum, ceremonies, Kanban board) to give predictability and clarity to the team.

I work well in team settings, always trying to maintain a good relationship with my colleagues, leaders, and direct reports, with respect and cordiality. I have leadership capacity, both at the interpersonal and technical levels, with experience acting as a Tech Lead.

I am quite extroverted, but without losing seriousness about important matters.

Appendix – List of Most Important Courses

This is not a descriptive list of all courses, but a selection of the main ones. Some of them have been grouped into a single item for easier viewing. The full list (of those available online) can be seen by clicking on the titles, when there are links.

Eduardo Pires - Training and Consulting

- ASP.NET MVC 5 – Enterprise Applications (24h)
- Software Architecture .NET (24h)
- ASP.NET Core and Angular 4 (50h)

Desenvolvedor.IO

Completed Certifications:

- Software Architect Training (54h)
- Front-End Angular Expert Training (27h)

Completed Courses (Summary):

- ASP.NET Core Enterprise Applications, ASP.NET MVC Core (55h)
- Software Architecture, DDD (33h)
- Mastering Software Testing (21h)
- Entity Framework Core (21h)
- Fundamentals of IdentityServer4 (3h)

Udemy

- Microsoft Azure: [Learn from Scratch] (9.5h) – by Gustavo Henrique Malta Magella
- AWS from scratch: learn cloud with real scenarios (13.5h) - by Gabriel Vilete, Pense Nuvem

Origamid

- UI Design for Beginners (34h)
- Advanced UI Design (30h)
- Advanced Typography (24h)
- CSS with SASS (12h)
- HTML and CSS for Beginners (46h)
- CSS Flexbox (6h)
- CSS Grid Layout (10h)

Alura

Completed Tracks:

- Node.js Career Track (76h)
- Node.js Developer Career Track
- Full-Stack MEAN Developer Career Track

Completed Courses (Summary):

- HTTP (20h)
- JavaScript (6 courses - 78h, including browser, IndexDB, design patterns, functional paradigm, and unit tests)
- Node.js (52h)
- Angular (6 courses - 86h)
- React (14h)
- Scrum and Agility (8 courses - 48h)
- C#, EF, MongoDB, and Selenium (12 courses - 108h)
- Git (30h)
- Windows and Linux (17h)
- Networks (25h)
- Docker and Kubernetes (3 courses – 30h)
- Azure (12h)

Alura Língua

5 modules completed – Beginner, Basic, Pre-Intermediate, Intermediate, and Advanced (20h each – 100h total)
